Seeking a 12-month Software Engineering Internship | Available Feb 2027 – Feb 2028

SUMMARY

Computer Science student at BINUS University, building web and mobile products since 2022. Recently rewrote a live, paid exam platform solo (24 tables, ~24,000 lines of TypeScript), including its payment and authentication flows. Main stack: **TypeScript, React, Next.js, NestJS, PostgreSQL**.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Kotlin, SQL, PHP, HTML, CSS
Frontend	React, Next.js, Tailwind CSS, Vite, React Native (Expo), Jetpack Compose
Backend	Node.js, NestJS, Server Actions, Prisma, Drizzle ORM, REST APIs, OAuth; PostgreSQL, Supabase (RLS), Firebase, Room
Tools	Git, Vercel, Turborepo, pnpm, Vitest

EXPERIENCE

Full Stack Engineer (Contract) — CreativIn **Jul 2026 – Present**

- Build and ship client-facing web features end to end with TypeScript, React, and Node.js, covering schema, API, and UI
- Contribute to architecture and data modelling decisions with the product team

Freelance Full Stack Engineer — Self-employed **Dec 2022 – Present**

- Build web and mobile apps for small businesses and founders, from requirements and data model to deployment and maintenance

IT Support Specialist (Part-time) — Alchemist Law Office, Jakarta **Sep 2024 – Sep 2025**

- Supported staff with hardware, software, and network issues; maintained the Excel-based workflows used across the office

Web Designer (Intern) — UTERO Indonesia, Malang **Dec 2022 – Mar 2023**

- Designed and built responsive web pages from brand and layout requirements

PROJECTS

PassingLab — paid UTBK tryout platform **Mar 2026 – Present**

Next.js 16, React 19, TypeScript, Supabase Postgres, Drizzle ORM *passinglab.id*

- Sole engineer on a full rewrite of a live Laravel product to Next.js App Router, migrating the old MySQL data with a dry-run-first script; now 24 tables and ~24,000 lines serving 1,604 questions across 7 UTBK subtests
- Built an exam engine that never loses an answer: idempotent autosave, a server-side timer that ignores the browser clock, and seeded shuffling so a reload restores the same question order
- Closed an inherited account-takeover hole (purpose-scoped single-use OTPs, attempt limits, bcrypt, DB-backed rate limiting) and made QRIS payments safe to retry by re-verifying every webhook with the provider

HakaiKOL — influencer marketplace **2026 – Present**

React, Vite, NestJS, Prisma, PostgreSQL, Supabase *hakaikol.vercel.app*

- Two-sided marketplace running a full campaign in one record (discovery, brief, drafts, proof of posting, invoice, report), with Instagram and TikTok OAuth for verified follower and engagement data
- Locked the public Supabase key to auth and storage only; all data goes through NestJS, with RLS kept on every table as a second layer

HakaiMusic — native Android music player **2026 – Present**

Kotlin, Jetpack Compose, Media3, ExoPlayer, Room, Firestore *github.com/k41ts/hakaimusic*

- Dual-engine player (ExoPlayer with a WebView fallback) behind one media session, offline-first storage in Room, and Firestore sync that never duplicates on retry

KaiCash — personal finance app **Jun 2026 – Present**

React Native, Expo, Firebase, TypeScript *github.com/k41ts/kaicash*

- Android money tracker with budgets and savings goals, plus parent–child account pairing for real-time spending supervision

EDUCATION

BINUS University — Bachelor of Computer Science **Aug 2024 – Sep 2028 (expected)**

SMK Telekomunikasi Darul Ulum — Software Engineering (RPL) **Aug 2021 – Jun 2024**
